BASIS FOR REJECTIONS

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

REJECTION OF CLAIMS OVER PRIOR ART

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Schneider (4,981,031). See Figure 1 where the guide beam is provided with first carrier mechanism 23, 25, 27, 29 and 31 driven by rod system 37 and a second carrier mechanism 24, 26, 28 and 30 driven by rod system 36. Each of the first and second carrier mechanisms is provided with cross bars 34.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by VanderZee (5,979,212). See Figure 14 where the guide beams 40 support a plurality of carriers (unlabeled) with a first carrier mechanism 42c being upstream of a second carrier mechanism 42b, each of the carrier mechanism having plurality of carriers (see Figure 4). The carriers can be moved independently by drives 230, 246, 248. These drives can vertically move the carriers. The cross bars are shown at 130, 132. The lifting devices for the guide beams are shown in Figure 1 at 52, 54.

Art Unit: 3725

Claims 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Allgoewer (5,727,416). See Figures 1-3 where the feed beams 3 are provided with vertically moving bodies 5, each having a lifting device 6, for vertically moving a cross bar 12 that is attached to opposed pairs of vertically moving bodies. The lifting devices 6 are shown to be above the feed beams 3. As to claim 7, see Figure 6 where the lifting devices 1, 6 can be mounted to be in a freely swinging arrangement through the socket joints 25, 26.

PRIOR ART CITED BY EXAMINER
